Course Description.

The study of organizational behavior considers the employee as an individual, the team as a micro-social group, and the company as a system and society. It also studies the relationships between these. The goal is to discover better management practices that recognize and harness the human aspect—both psychological and cultural—in the functioning of a company. A good manager is a good psychologist and a good sociologist, and is fully aware that a company's human resources have emotions, perceptions, personalities, abilities, knowledge, potentials, limitations, interests, bothers, prejudices, customs, beliefs, habits, and traditions.

Course Objectives

- To familiarize ourselves with various relevant theories that address human behavior in the context of company performance.
- Establish the difference between values, perception attitude, personality, and behavior.
- Distinguish the various motivation theories and understand the effect of different policies on the average performance of employees.
- To familiarize ourselves with the benefits, as well as the difficulties and challenges, that group behavior and work teams present. To reason about possible solutions to the most common problems. To learn to differentiate situations that require an individual vs. a team effort.
- To identify obstacles inherent in the decision-making process, individually and in groups.
- To learn how to utilize the library databases for academic research. To build, based on library research, academic-style reports that properly cite sources from a bibliographic,

Comportamiento Humano I — Temario

empirical, logical, and ethical point of view. This includes properly applying the AoM style of referencing, which is approved for thesis work.

- To understand better the managerial and labor culture in Mexico, and the application of management theories to the Mexican context.
- To distinguish and apply various leadership theories to concrete cases.
- To explain the role played by power and politics in the implantation of organizational initiatives.
- To identify factors critical to the success of organizational change.
- To identify the advantages and disadvantages of organizational culture.

Question sets

You will receive question sets on the assigned readings. These question sets are the basis for class discussion. There will be a **short quiz** (two questions, multiple-choice) at the beginning of each class in which a question set is due. The quizzes will be designed so that only people who actually did the homework will be able to answer them. Being two-question quizzes, the only possible grades will be 0, 50, and 100.

Please observe the following rules concerning these question sets:

- 1) You must do these question sets in teams of 3 or 4 students. Choose your teams freely.
- 2) **The work must not be divided.** You are to meet together, in real time (physically or virtually), to discuss the answers to each and every question. I want you to have a debate.
- 3) No more than two or three short paragraphs per answer.
- 4) The better you do these question sets, the better you are preparing for the multiple-choice partial exam, and for the multiple-choice final exam. If you do them really well, you won't have to study for either exam.
- 5) **You have to bring your answered question sets to class. Not one copy per team, but one copy per person. Print them.**

Relationship between question sets and participation

Your participation in class will reflect whether you *did* have a debate when doing the question sets. If you do not convince me that you have thought about the issues, your expressions will not count as real participations.

Comportamiento Humano I — Temario

Cases

We will do 3 or 4 cases during the course. You will do them in randomly assigned teams of 5 students each. You will analyze and solve a case, and prepare a PowerPoint to present your solution. It must be well-practiced, because you will have only 8 minutes to do your presentation. If you don't finish on time, you lose points.

Do not prepare your PowerPoint on a Mac. This guarantees problems when the time comes to use the in-class computer.

Course evaluation

40% Cases plus partials

30% Class participation

10% Simulations

20% Final Exam (**you must pass it in order to pass the course**)

NOTE: You require 80% assistance IN CLASS in order to keep your right to the final exam (and therefore to pass the course).

→→TAKE IT SERIOUSLY (I do...)

MIND→ Whosoever accumulates 6 absences will be notified of his/her IMMEDIATE PERIL. The seventh absence will mean DOOM: can't do the final; can't pass.

MIND→ Whoever arrives 15 minutes late or more, will be marked as "tardy." Two of these are the same as an absence, and will count towards your 6.

MIND → Every two absences will shave 10 points (over 100) from your participation grade.

→→TAKE IT SERIOUSLY.

THERE WILL BE ZERO FLEXIBILITY IN THE ABSENCES POLICY.

FOREWARNED IS FOREARMED

MIND

Comportamiento Humano I — Temario

How to hand in the assignments?

Question sets, cases, and other assignments must all be sent to fgilw@comunidad.itam.mx.

Readings:

- Robbins & Judge (2013) *Organizational Behavior*. 15th ed. Pearson/Prentice Hall.
 - You will find them in the bookstore.
 - The library has previous editions. **But best to get the right edition: 2013, 15th ed.**

There is also a **READING PACKET**. When I assign a reading that is not in the Robbins, you need to get it from the **READING PACKET** in Comunidad.

Currículum Vitae

Francisco Gil-White es un antropólogo evolutivo, cultural, y cognitivo. Cursó una licenciatura en composición musical en New England Conservatory of Music en Boston, MA. Cursó una maestría en ciencias sociales y biológicas en la Universidad de Chicago. Su tesis de maestría, *The use of biology: A general defense of the evolutionary approach to human behavior*, ganó el premio Earl & Esther Johnson Prize de la Universidad de Chicago. Cursó un doctorado en antropología biológica y cultural en UCLA. Su trabajo de tesis doctoral, *The Evolutionary Psychology of Ethnicity*, ganó el *New Investigator Prize* de la prestigiada *Human Behavior and Evolution Society*. Este trabajo se basó en estudio etnográfico y psicológico de campo de 14 meses en residencia con los pastores nómadas de la tribu Torguud, y sus vecinos Kasajos, en Mongolia occidental. De 2001 a 2006 impartió los temas de psicología evolutiva y cultural en el Departamento de Psicología de la Universidad de Pennsylvania, y trabajo en el *Solomon Asch Center for Study of Ethnopolitical Conflict*. Su trabajo se centra sobre las leyes, basadas en la psicología del aprendizaje social, que rigen la transmisión de conocimiento en las sociedades humanas. Dentro de este muy amplio universo, se interesa sobre todo en la transmisión de prejuicios racistas y la susceptibilidad a los mismos, el sesgo conformista, las estructuras de dominancia y prestigio, y las relaciones entre las clases sociales, en particular las ideologías de las clases gobernantes de Occidente a través de los siglos. Su trabajo ha sido publicado y citado en revistas académicas de nivel mundial en antropología, psicología, filosofía, y ciencias políticas. Ha sido beneficiario de numerosas becas y apoyos de investigación. Actualmente, está terminando el primer volumen de una investigación sobre la historia política de Occidente a través de la crónica de la experiencia judía.
